

General View

Closed view shows the device a bit “tilted” to protect enormous direct sunlight

Sun Orientation affats opening and building orientation

Since Kuala Lumpur is very hot and humid area, I tried to put a big opening to SE area because SE mostly affects morning sun and sun will pass to the oposite side after noon. Tried to design passive way since we do not have a cooling system to use in side of the building.Since opening is SE, I designed the shading device vertically.
